

Managed Sentinel – O365 Security Monitoring

Securely run and grow your business

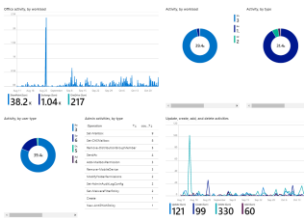

Monitor and alert against security threats

Go beyond built-in security controls existing in your O365 environment and be protected against email accounts compromise, brute force attacks, malware infections or abnormal Office 365 activities, while automatically being alerted.

Monitor business data against leaks

Use Office 365 applications without putting your company information at risk by adding protection, ranging from access privileges changes, specific keywords email monitoring, and high privilege accounts monitoring.

Know what is happening in organization's Office 365

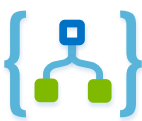

Daily operation reports showing your up to date Office 365 activity, allowing your organization to optimize the use of Office 365 licenses and reduce ongoing costs.
